

Computer Science/Computer Engineering Embedded Internship

Summer Internship C/C++ in downtown State College. Project Vive is a humanitarian effort to provide speech generation devices individuals with disabilities at an affordable cost. This is a great way to see your skills in action and make an impact in someone's life through speech. I encourage you to check out our Website at Projectvive.com. You will have the opportunity to work with children and adults with disabilities if interested. We have openings for engineers/programmers who want to be part of a team and want to make a difference. You will work closely with our mechanical and electronic engineers as you develop and test programs on our devices. This is a 20 hour commitment. This position emphasizes project design responsibilities, including user interface ease of use and performance tradeoffs, documentation, and test plans.
